Research interests

Enumerative problems related to surfaces and their moduli spaces: hyperbolic / translation / square-tiled surfaces, Masur–Veech volumes, combinatorial maps (ribbon graphs), intersection theory on $\mathcal{M}_{g,n}$, Hurwitz numbers.

I am also interested in combinatorial theory of polytopes, integer point enumeration in polyhedra, algorithmic problems on surfaces, mapping class groups and I enjoy experimenting in SageMath.

Preprints

Volumes of odd strata of quadratic differentials,
with E. Duryev, É. Goujard.
